### REC\_DS using C\_Week 5\_COD\_Question 5

Attempt : 2  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : Coding

##### 1. Problem Statement

In his computer science class, John is learning about Binary Search Trees (BST). He wants to build a BST and find the maximum value in the tree.

Help him by writing a program to insert nodes into a BST and find the maximum value in the tree.

##### *Input Format*

The first line of input consists of an integer N, representing the number of nodes in the BST.

The second line consists of N space-separated integers, representing the values of the nodes to insert into the BST.

##### *Output Format*

The output prints the maximum value in the BST.

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

10 5 15 2 7

Output: 15

### ***Answer***

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
struct TreeNode {
```

```
    int data;
```

```
    struct TreeNode* left;
```

```
    struct TreeNode* right;
```

```
};
```

```
struct TreeNode* createNode(int key) {
```

```
    struct TreeNode* newNode = (struct TreeNode*)malloc(sizeof(struct  
TreeNode));
```

```
    newNode->data = key;
```

```
    newNode->left = newNode->right = NULL;
```

```
    return newNode;
```

```
}
```

```
// You are using GCC
```

```
struct TreeNode* insert(struct TreeNode* root, int key) {
```

```
    //Type your code here
```

```
    if(root==NULL){
```

```
        return createNode(key);
```

```
    }else if(key<root->data){
```

```
        root->left=insert(root->left,key);
```

```
    }else if(key>root->data){
```

```
        root->right=insert(root->right,key);
```

```
    }
```

```
    return root;
```

```
}
```

```

int findMax(struct TreeNode* root) {
    //Type your code here
    if(root==NULL){
        return NULL;
    }

    if(root!=NULL){
        while(root->right!=NULL){
            root=root->right;
        }

        return root->data;
    }
}

int main() {
    int N, rootValue;
    scanf("%d", &N);

    struct TreeNode* root = NULL;

    for (int i = 0; i < N; i++) {
        int key;
        scanf("%d", &key);
        if (i == 0) rootValue = key;
        root = insert(root, key);
    }

    int maxVal = findMax(root);
    if (maxVal != -1) {
        printf("%d", maxVal);
    }

    return 0;
}

```

**Status :** Correct

**Marks :** 10/10
